Dear colleagues,

We are pleased to announce the launch of a new IVS webinar series, "Advanced characterization methods for materials and interfaces". This unique webinar series presents lectures on a broad range of topics related to the characterization methods used in research and development of advanced materials. Topics will include advanced spectroscopies, new microscopy techniques, and the associated image and data processing, each presented by expert scientists. The 45-minute talk will be followed by a Q&A session where all the participants can ask questions (15 - 30 min.)

Upcoming webinar:

Wednesday, Dec 20 at 14:00 (Israel time)

"Computerised Tomography (CT) in Materials Research"

Dolev
Ministry of Defense

Dolev got his M.E. in Materials Engineering at the Technion, and runs the non-destructive testing (NDT) lab in the ministry of defence since 2016. As part of his office, Dolev advises in R&D and failure analysis research using X-ray imaging and micro-CT. In this talk, Dolev will explain the principals of using CT in materials research, strengths and weaknesses, and how this method can improve the study of materials in your lab.

Further details can be found on the IVS webinar page.
Hope to see you there!!
